

HAPLOTYPES OF THE FCER1A GENE

ABSTRACT OF THE INVENTION

- Novel genetic variants of the Fc Fragment Of Ige, High Affinity I, Receptor For; Alpha Polypeptide (FCER1A) gene are described. Various genotypes, haplotypes, and haplotype pairs that exist in the general United States population are disclosed for the FCER1A gene. Compositions and methods for haplotyping and/or genotyping the FCER1A gene in an individual are also disclosed. Polynucleotides defined by the haplotypes disclosed herein are also described.
